

PRODUCT OVERVIEW

PLANSTUDIO®

Site based drafting and
mark-up application

Introducing **PlanStudio**: An app from Locatrix that delivers to fire engineers, contractors, building certifiers a simple way to create spatially accurate floorplans and evacuation diagrams. **PlanStudio** delivers on the promise of site based mark-ups completed on the first visit to site then publishing with the press of a button.

PlanStudio is a mobile app for drafting, editing, viewing and adding mark-ups to CAD drawings directly from your tablet. Onsite contractors can increase their productivity and revenue by connecting their work to cloud storage and directly create evacuation signs and diagrams. Traditional drafting software is complex and difficult to use, a manual mark-up often requiring transferring onto a sign template by a third party. **PlanStudio** is easy to use for beginners but robust enough for a novice with robust enough to keep the power users happy.

Key features include:

- Easily create and edit accurate floorplans using a combination of existing drawings, geolocation, satellite imagery and LiDAR scanning technology.
- Measure distances (from indoors to outdoors) with accuracy.
- Visually locate and track various assets within a building, Using accurate floorplans as a visual representation of location and details for each asset.
- Opportunity to record data (including photos) of assets within a building within metadata (audit trail and maintenance records).
- Assist with auditing and defect management, by allowing data to be captured, stored and updated on a floorplan rather than a spreadsheet with capability to export reports and spatial information for a building.

For a simpler way to create floorplans and evacuation diagrams that will satisfy your client's requirements, take the first step towards a new interactive approach.
